DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4 and 11-13, drawn to an electric fluid dispenser, classified in class 251, subclass 129.05.
 - II. Claims 5-10 and 14, drawn to a driver circuit, classified in class 323, subclass 293.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the electric fluid dispenser of claim 1 does not need a power switching circuit having a time variable component determined by the magnitude variations of a nonconstant voltage. The subcombination has separate utility such as an electrical fuel dispenser in an internal combustion engine.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
